

Positive Photoresist AR-P 3200

AR-P 3200 photoresist series for high film thicknesses

Thick positive resists for electroplating and microsystems technology

Characterisation

- broadband UV, i-line, g-line
- high photosensitivity, high resolution
- profiles with high edge steepness dims. accuracy
- plasma etch resistant, electroplating-stable
- 3210/3250 for film thicknesses up to 40 µm/20 µm
- 3220 transparent for thick films up to 100 µm in multiple coating steps, 100 µm development in one step
- combination of novolac and naphthoquinone diazide
- safer solvent PGMEA

Processing instructions (for the processing of thick films > 40 µm)

Coating: Coating should be performed in two or several steps using the same procedure. After a low initial spin speed (30 s), a main spin speed of 250 – 500 rpm for at least 2-5 min should be chosen. A brief subsequent spinning off at 600 – 800 rpm for 5 s reduces edge bead formation.

Tempering: Tempering should be performed in 2 steps: 1. 75 °C, 5 min hot plate or 70 °C, 30 min convection oven; 2. 90 °C, 20 min hot plate or 90 °C, 80 min convection oven. After tempering, a slow cooling is recommended to avoid stress cracks.

Positive Photoresist AR-P 3200

Sensitivity vs. duration of the soft bake

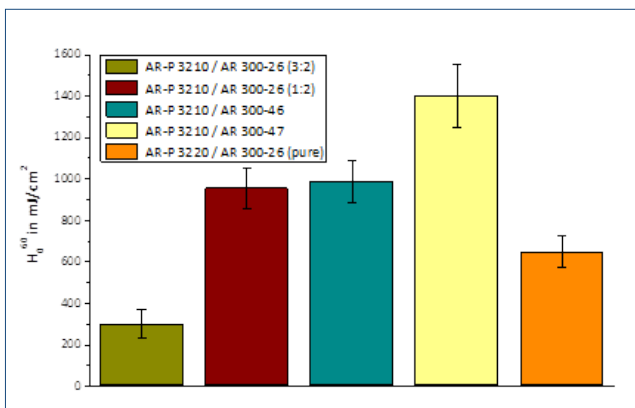

After 2 hours, the sensitivity remains more or less constant (broadband UV, resist thickness 20 μ m).

Residual solvent after tempering

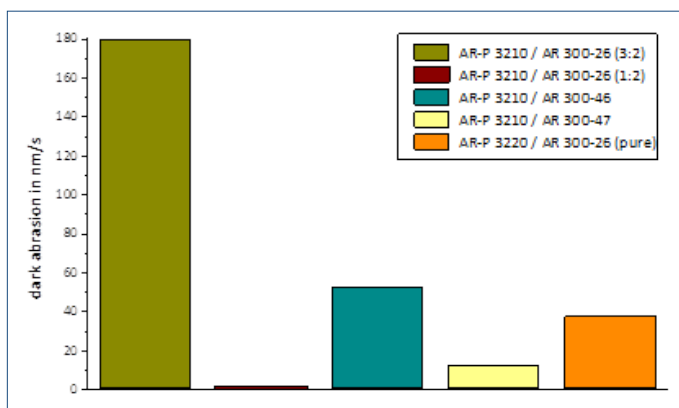

After a bake at 95 °C, approx. 7 % of the solvent remain in the layer (initial solids content: 47 %)

Sensitivity in different developers

Film thickness 20 μ m, soft bake 85 °C, 1 h convection oven, bb UV

Dark erosion in different developers

Erosion corresponding to determined sensitivities

Grey tone mask lithography

28 μ m-high 3D pyramids with AR-P 3220

Photolysis of photo-active compound (PAC)

Chemical reaction for bleaching and full exposure of the layer (Süss-reaction)

The transparency of AR-P 3220 is higher as compared to AR-P 3210, due to the lower concentration of the PAC. The gradation is accordingly relatively low. This fact can be used for the fabrication of three-dimensional structures using grey tone masks with AR-3220. Different exposure doses will result in different resist film thicknesses.
